

BEARING WEAR MONITORING SYSTEM

ENHANCE VESSEL PERFORMANCE AND EXTEND BEARING LIFESPAN EFFORTLESSLY

Safeguard your vessel's reliability with our Bearing Wear Monitoring System. Stay ahead of maintenance needs, enhance performance, and ensure smooth operations on the high seas

WE OFFER

CLEAR & CONCISE REPORTS ENSURING EASY INTERPRETATION OF BEARING CONDITIONS

FEATURES

- Safeguarding engine operation
- Measuring & displaying crosshead, crank, and main bearings
- Serves as an early warning system
- Alerting operators to potential bearing seizure issues during engine operation
- Utilizes two sensors strategically placed in each cylinder compartment
- Unique capability to compensate for various factors, including engine speed, crankcase temperature and engine deflections resulting from vessel maneuvers or cargo loading
