

# Optical Torsion Monitoring System

Torsion monitoring system is designed to provide improved efficiency, overload protection and prevention of breakdown. The system is based on extremely accurate optical sensor technology and gives precise measurement. It can be easily mounted around shafts in power transmission systems.

## FEATURES

- Robust
- Durable
- Accurate
- Maintenance Free
- Easy Installation

## APPLICATION

Continuous power consumption measurement

Continuous level check for :

- Torque
- Speed
- Power

Direct visual control of changes in :

- Engine settings
- Trim & draught
