

POWER SUPPLY MODULE

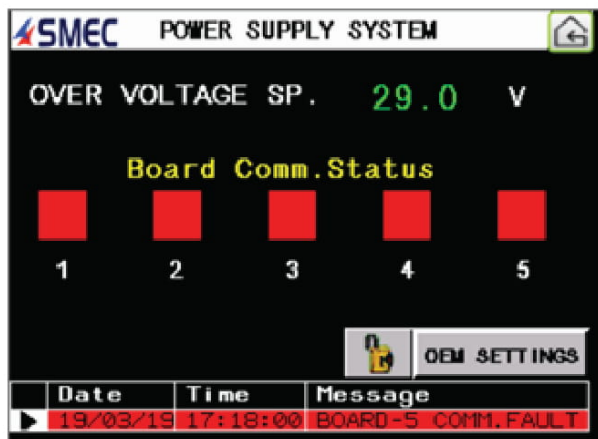

The 24V, 100A power supply module is a high precision rectifier regulated DC power supply module designed to provide steady supply of high current 24V DC supply for any required solutions mainly for the power supplies of loads which draw heavy current in the range of 100 Amps.

FEATURES

- Steady output
- Redundant design
- Monitoring facility
- Precise adjustments
- Scalable architecture

COMPONENTS

- Control transformer (step down)
- SMPS for control supply (12V)
- Main rectifier PCBs
- Isolation Diodes
- Interactive serially interfaced HMI
